

**python matrix and introduction to numpy programiz** - *python matrix python doesn't have a built in type for matrices however we can treat list of a list as a matrix for example a 1 4 5 5 8 9 we can treat this list of a list as a matrix having 2 rows and 3 columns be sure to learn about python lists before proceed this article, **python arrays with examples programiz** - as you might have guessed from the above example we need to import array module to create arrays for example `import array as arr a = arr.array('d', [1, 1, 3, 5, 4, 5]) print a` here we created an array of float type the letter d is a type code this determines the type of the array during creation commonly used type codes, **elementary matrix operations in python it best kept** - elementary matrix operations in python octave and matlab are high level languages that support vectors and matrices with a very simple syntax python support for matrices is not as nice but few little tricks should do the job let me first briefly introduce how octave and matlab support elementary matrices operations, **writing an array to a file python daniweb** - hi i have generated an array of random numbers and i m trying to then write this array to a txt file but the code i have written doesn't seem to do this correctly any help on this would be great here is what i have so far, **python write array values into file stack overflow** - i m coding a python project that involves me reading a file and filling an array with the integer values in the file doing a whole crazy none important process tic tac toe game and then at the end adding a number wins to the array and print it back out to the file, **how to write python array data to excel stack** - from here i have created a 2d array with 9 columns and 171 rows i am looking for a way to iterate through this array and write each entry in order to a sheet i am wondering if i should create a list instead or how to do this with the array i have created any help would be greatly appreciated*
